

## TURBOCHARGERS TEST CENTRE: The latest technologies

*The CRITT M2A keeps considering the R&D services' and the automotive industry's expectations. That is the reason why it planned to create a Turbochargers Test Centre , build on its site (Bruay-la-Buissière, Northern France)*

This new R&D tool will be available via several different concepts :

- complete study run by the customer
- complete study performed by the CRITT M2A
- Study performed by the CRITT M2A in partnership with the customer and an engineering company.

The Turbo Test Centre will open over spring 2008.

The CRITT M2A really wants its potential customers to be involved in this project and asked them to express all their needs.

2 meetings have already taken place on 27 June and 24 October 2006.

That enables the CRITT M2A to have a better vision of its potential customers' expectations.

The first version of the specifications book has been planned for the end of 2006.

In addition, the CRITT M2A decided to keep its partners and customers informed about the Turbo Test Centre project advancement by periodic newsletters publications.
