

FOCUS ON SYTEC 2016

SyTec 2016

For 9 years, various technical presentations are proposed around the latest trends and technological advances. The SYTEC is a unique opportunity for CRITT M2A to share its knowledge and R & D projects with all professionals, academic institutions and the automotive industry.

On October 3rd and 4th, more than sixty participants attended workshops and technical presentations. Dynamic activities were also proposed during these two days: a challenge on the electric car Renault ZOE and an experience in a Citroën DS3 R3 Rally car driven by an expert.

CRITT M2A team thanks you for your active participation and would especially like to thank the speakers who have made this 9th edition a success.

Thank you for this day of discussions and sharing. We hope to see you again at the SYTEC 2017 !

SYTEC 2016 presentations

NVH: NVH challenges of modern automotive powertrains
 NVH: Matrix formalisms for in duct acoustic devices characterization
 TURBO: Methods for efficiency evaluation of automotive turbocharger
 METROLOGY: Impact study of an Airflow Rectifier on Mass Flow Measurement
 R&D: Technology to measure emotional responses in humans
